Bug Hunter 3

The bug police has heard of your remarkable skills as a Python programmer.

They have recruited you as a bug hunter to help them find and fix bugs in their code.

Instructions

Find the bug in the following code:

```python
def sum_positive_numbers_only(numbers):
    total = 0
    for number in numbers:
        if number > 0:
            number_is_positive = True
        total += number
    return total

numbers_list = [1, -2, 3, 4, -5, 6]
print(sum_positive_numbers_only(numbers_list))  #
Expected: 14
```

Guidelines

- Use the strategies learnt in the Debugging lesson:
    - Reading the error
    - Debugging with print statements
    - Rubber duck (explain your problem to someone or something)
    - Debugging with `pdb`

To submit

Fixed code, with the fixed line explained with a comment.
